Experience 6+ years

Summary

Full Stack Software Engineer with 6+ years of experience building scalable web applications and distributed systems. Specialized in React, Redux, Go, and Node.js with a strong focus on performance, reliability, and user-centric design. Proven ability to develop high-impact features, optimize system performance, and collaborate across teams to deliver robust, production-grade solutions.

Skills

Front-End: ReactJS, Redux, Angular2+, Material UI, NextJS, SolidJS, SCSS

Back-End: Go, Node.js, ExpressJS

Tools: Docker, Git, Storybook, NX, Figma

Other Technologies: Typescript, RxJS, NgRx, MongoDB, MySQL

Work History

IBM ISL - Software Development Engineer II (Jan 2024 - Present)

Working as a Full Stack Developer on a cloud cost optimization platform using React (Redux) and Go in a microservices architecture.

Improved UI performance by 75% by optimizing rendering, reducing unnecessary re-renders, and enhancing state management.

Developed scalable and secure REST APIs using Echo in Go, incorporating authentication and efficient request handling.

Built and maintained customer credential management workflows for multiple cloud providers, ensuring reliability and data validation.

Designed responsive and accessible UI components using React and Material UI to improve user experience.

Collaborated across teams to implement new features and enhance system performance in production environments.

Contributed to backend logic enhancements using Go and Java for feature development and system improvements.

Geekyants Bangalore - Software Engineer III (Dec 2021 - Jan 2024)

Developed reusable UI components using React and Angular for a large-scale design system adopted across multiple applications.

Built responsive and high-performance components ensuring consistency and scalability across platforms.

Collaborated closely with designers and product teams to translate requirements into intuitive user interfaces.

Used Storybook to standardize component development and improve developer productivity.

Contributed to monorepo architecture using NX, improving maintainability and build performance.

Built developer tooling (VS Code extensions) to streamline workflows and improve engineering efficiency.

Wipro LTD Bangalore - Project Engineer (Jun 2019 - Dec 2021)

Contributed to the development of scalable Angular web applications with focus on performance and maintainability.

Implemented NgRx (effects, reducers, selectors) for structured and scalable state management.

Enhanced UI using Angular Material and built data-rich features using RxJS and chart libraries.

Developed backend APIs using Node.js and Express to support frontend functionality.

Education

Bachelor of Engineering in Computer Science - East West Institute of Technology, Bangalore

Key Skills

- Experience in building scalable web applications and microservices
- Strong problem-solving and debugging skills
- Ability to work across frontend and backend systems
- Collaborative team player with ownership mindset
- Passion for building high-quality, user-centric products
